Be Bug Free Services: Stay Mosquito-Free This Season!

Dear Valued Customers,

Spring is just around the corner, and with it comes the return of warm evenings, outdoor gatherings, and, unfortunately, mosquitoes. At Be Bug Free Services, we're committed to ensuring you can enjoy your time outdoors without the nuisance and health risks these pests bring.

This season, we're excited to highlight our use of In2Care Stations, an innovative and highly effective solution to control mosquito populations in Austin, TX and surrounding areas. Here's how these stations work and how you can help us keep mosquitoes away.

How In2Care Stations Work

The In2care mosquito trap is made of durable plastic and uses water with an odor lure to attract egg-laying Aedes mosquitoes. Once inside, the mosquitoes contact the specially treated gauze near the water surface and get contaminated with larvicides and a fungus. We exploit the fact that Aedes like to divide their eggs over multiple sites; by letting them fly out of the trap whilst carrying larvacide on their legs. They transport the larvacide and contaminate several breeding sites around the trap. In this way, we can kill larvae in small and hard-to-find breeding sources. The mosquito also gets infected with an insect-specific fungus that kills her before she can spread diseases.

What to Look For

To complement our mosquito control efforts, here are some common mosquito breeding grounds to monitor around your property:

Stagnant Water: Check for standing water in flower pots, gutters, birdbaths, and unused containers.

Shady Areas: Mosquitoes rest in cool, damp spots like under decks or dense foliage.

Clogged Drains: Ensure all outdoor drains and gutters are free-flowing.

What Not to Do

Avoiding these practices will go a long way in keeping mosquitoes at bay:

Don't Overwater: Excess water in your yard creates ideal breeding conditions.

Don't Leave Open Containers: Buckets, tarps, and lids can collect rainwater and become mosquito havens.

Don't Skip Maintenance: Regularly clean and maintain your property to eliminate potential nesting sites.

Your Role in Mosquito Control

While our In2Care Stations are incredibly effective, your participation plays a critical role in maximizing results. By maintaining a tidy yard, eliminating standing water, and following our tips above, you'll enhance the effectiveness of our system and enjoy a mosquito-free outdoor space.

Ready for Mosquito-Free Living?
